

Application Hosting

Design Done Right

The SpinDance team is ready to invest time in understanding your unique solution, internal processes and measurement of success. Our *Design Done Right* approach will ensure that we understand your application inside and out, to get it right the first time. Our team's expertise in hardware **architecture design** will provide you a structure with high availability and scalability for future growth.

Need to craft a plan for code **deployments**? We leverage technologies that create repeatable and flexible deployments through Continuous Integration and Continuous Deployment. Our team will effectively use Infrastructure as Code to build robust processes for your **application**.

In an effort to bring visibility, we will work with you to understand your needs for application **monitoring**. As an Application Hosting customer, it is important to us that you are involved and aware of your ongoing application activity.

Our Place or Yours

Our team will build and configure your servers to the specifications necessary for consistent, ongoing performance. Utilizing our Design Done Right approach, we have the knowledge necessary to build an application hosting solution to support your current business while considering future growth. When it comes to hosting platforms, we can host them on our robust, secure and dedicated hardware platform. Our team can also work with a third party provider of your preference. Either way, we will ensure that the setup is done correctly and that the proper monitoring is enabled to move you down a path to success.

Experts You'll Know By Name

We won't transfer you to another department or put you on hold. You will interact directly with our team when questions arise. Our team of experts will provide:

- 24/7/365 Monitoring
- Troubleshooting
- Back-up Strategy & Execution
- Server Setup
- Incident Management
- Patch Management
- Deployment Process Management
- Metric Reporting
