Who

A Software Assessment is for organizations wanting to evaluate their current software architecture to learn of the software needs to support IoT into the future.

No matter what stage of the IoT Journey your organization is in, a Software Assessment is an invaluable tool to identify, clarify, & illuminate the path to a successful IoT Product launch.

Why

We conduct the assessment to measure where your organization is and to fully understand the roadmap to your IoT destination.

We leverage our understanding of business value propositions and our proven expertise in developing high-value software to collaborate with you and create realistic deliverables within achievable timelines.

Our Approach

Our consistent approach drives proven and powerful results!

1 Assess

We get to know you, your team, and your systems to assess where you are and where you want to go.

2 Map

We map your path using workshops & collaboration, roadmaps, and clear strategies on how to get there.

3 Design

We develop an end-to-end system design and share how the data flows throughout the build.

4 Develop

Using agile principles, we build small, demo-able parts and give you a chance to weigh in throughout the project.

5 Maintain & Support

Our team delivers ongoing software updates and maintenance after launch.

What

Our review includes the following:

- Software architecture & implementation
- Use of best practices & standards
- The complexity of challenges/risks to create, add and support new products
- Opportunities for cross-platform code
- Maintenance considerations
- Testing suite
- Security concerns
- DevOps & existing documentation
- Other items as needed

Benefits

At the end of the assessment, we will provide you with a written report of all our findings. We will include a proposal for any requested or recommended improvements.

Our professional presentation of those recommendations will be in a planned meeting with members of our team and your internal stakeholders. You will also receive a documented delivery approach.
